

Advanced Programming C#

Lecture 3

dr inż. Małgorzata Janik
malgorzata.janik@pw.edu.pl

Windows Presentation Foundation

Windows Presentation Foundation

- Allows for clear separation between Design and Functionality
- Better GUI

WPF vs Windows Forms

Window Form

Windows Presentation Foundation

http://www.slideshare.net/nagaharish_movva/windows-presentation-foundation-4377923

Unified presentation

	GDI/Windows Forms	Flash	PDF	COM Interop	Directx	WPF
3D					✓	✓
Documents			✓			✓
Animation		✓			✓	✓
Video		✓		✓	✓	✓
Interactive UI controls	✓	✓		✓		✓

http://www.slideshare.net/nagaharish_movva/windows-presentation-foundation-4377923

Working with WPF

- User interface is designed in XAML
- Underlying functionality is build using C#

XAML

```
<Button Width="60">  
    OK  
<Button.Background>  
    Blue  
</Button.Background>  
</Button>
```

Designer

C#

```
Button btn=new  
    Button();  
btn.Content="OK";  
btn.Width=60;  
btn.Background=new  
SolidColorBrush(Colors.  
    Blue);
```

VB.NET

```
Dim btn As New  
    Button  
btn.Content="OK"  
btn.Width=60  
btn.Background=new  
_SolidColorBrush  
_(Colors.Blue)
```

Developer

New Project: WPF Application

- File → New → Project... → WPF Application

Today

(1) WPF tutorial

(2) Advanced controls

(3) Ducks-shooting game

WPF

MainWindow.xaml → Design (XAML)

MainWindow.xaml.cs → Functionality (C#)

WPF Tutorial - Controls

Try both:

- Using Toolbox
- Creating Control by hand in XAML

WPF Tutorial - Properties

`<Button Content = "Show text" />`

`[Label] Content = "New label!"`
`FontSize="30"`

`[Image]`
`Source="..."`

`[RadioButton]`
`Foreground="Blue"`

Try both:

- Using Properties window
- Adding Property by hand in XAML

WPF Tutorial - Layouts

GridLayout: 3 rows, 3 columns

StackPanel:
Orientation:
Horizontal

StackPanel:
Orientation:
Vertical

WPF: Grid Layout

Everything between:

```
<grid>
```

```
</grid>
```

is in grid layout. By default there is 1 row and 1 column.

To create 2 rows and 3 columns we would need to add in the beginning following code:

```
<Grid.ColumnDefinitions>  
  <ColumnDefinition></ColumnDefinition>  
  <ColumnDefinition></ColumnDefinition>  
  <ColumnDefinition></ColumnDefinition>  
</Grid.ColumnDefinitions>  
<Grid.RowDefinitions>  
  <RowDefinition></RowDefinition>  
  <RowDefinition></RowDefinition>  
</Grid.RowDefinitions>
```

3 columns

2 rows

To put a control into certain column & row do:

```
<Button x:Name="button" Grid.Row="0" Grid.Column="0"  
  VerticalAlignment="Center" Content="Show text" />
```

WPF: Stack Layout

Everything between:

`<StackPanel>`

`</StackPanel>`

is in stack layout. Basic property of the StackPanel is Orientation, which can be **Horizontal** or **Vertical**.

```
<StackPanel Orientation="Horizontal" Height="52">  
    <Image x:Name="image1" HorizontalAlignment="Left" Height="60"  
        VerticalAlignment="Top" Width="50" Source="Resources/eye.png" Stretch="Fill"/>  
    <Label VerticalAlignment="Center">Show</Label>  
</StackPanel>
```

Adding image

- Similarly as before, add to the project using **Resources.resx**
- After adding an image, do:
 - Right click the image file in the Solution Explorer
 - Click Properties
 - Select Build Action to Resource
 - Clean and Build (from menu)
 - (→ Afterwards add an image / reload the image in the Properties window again → Source property → click arrow → choose again from the list)

Events

- When event is added, we move to the c# in the MainWindow.xaml.cs file

Try both:

- Using Properties window
- Creating Event by hand
in XAML

- Commands that may be useful:

```
labelShowText.Visibility = Visibility.Visible;  
labelCopyText.Foreground = Brushes.Red;  
labelCopyText.Content = textBox.Text;
```

Designing New Control

- Glass Button

More info:
<http://kishor-naik-dotnet.blogspot.com/2010/11/wpf-custom-glass-button-in-wpf.html>

- Project → Add
→ Resource
Dictionary...

- Resource Dictionary

Copy file:

<http://www.if.pw.edu.pl/~majanik/data/Csharp/Files/GlassButton.xaml>

Glass effect of
transparency

To use our GlassButton style, we must now add a resource reference into App.xaml file:

```
<ResourceDictionary Source="GlassButton.xaml"/>
```

Add control:

```
<Button Style="{DynamicResource GlassButton}"  
    Margin="0,0,24,22" x:Name="buttonGlass1" Height="82"VerticalAlignment="Bottom"  
    HorizontalAlignment="Right" Grid.Row="2" Grid.Column="2"  
    Width="132" Click="buttonGlass1_Click">Button</Button>
```

Shooting ducks

COUNTER

Label control
(changes
when duck is
shot or
disappears)

TARGET

Image control
(moved with
mouse)

DUCKS

Image control
(moved by the
Timer)

Useful tools

- Moving objects:

```
duck.Margin = new Thickness(duck1.Margin.Left + 2, duck1.Margin.Top, 0, 0);
```

- Get Mouse Position:

```
var point = e.GetPosition(imageBackground);
```

- Timer

```
System.Windows.Threading.DispatcherTimer dispatcherTimer = new  
    System.Windows.Threading.DispatcherTimer();
```

```
    dispatcherTimer.Tick += dispatcherTimer_Tick; //event!!
```

```
    dispatcherTimer.Interval = new TimeSpan(20, 0, 0);
```

```
    dispatcherTimer.Interval = TimeSpan.FromMilliseconds(1);
```

```
    dispatcherTimer.Start();
```

Useful tools

- Flip image:

```
duck.RenderTransformOrigin = new Point(0.5, 0.5);  
  
    ScaleTransform flipTrans = new ScaleTransform();  
  
    flipTrans.ScaleX = -1; // or 1  
  
    //flipTrns.ScaleY = -1;  
  
    duck.RenderTransform = flipTrans;
```

Resources that can be used

- Eye:

<http://www.if.pw.edu.pl/~majanik/data/Csharp/Files/eye.png>

- Glass button:

<http://www.if.pw.edu.pl/~majanik/data/Csharp/Files/GlassButton.xaml>

- Ducks:

<http://www.if.pw.edu.pl/~majanik/data/Csharp/Files/duck.png>

http://www.if.pw.edu.pl/~majanik/data/Csharp/Files/Aero_Grass.jpg

<http://www.if.pw.edu.pl/~majanik/data/Csharp/Files/target.png>

THE END
